

Level Design Document

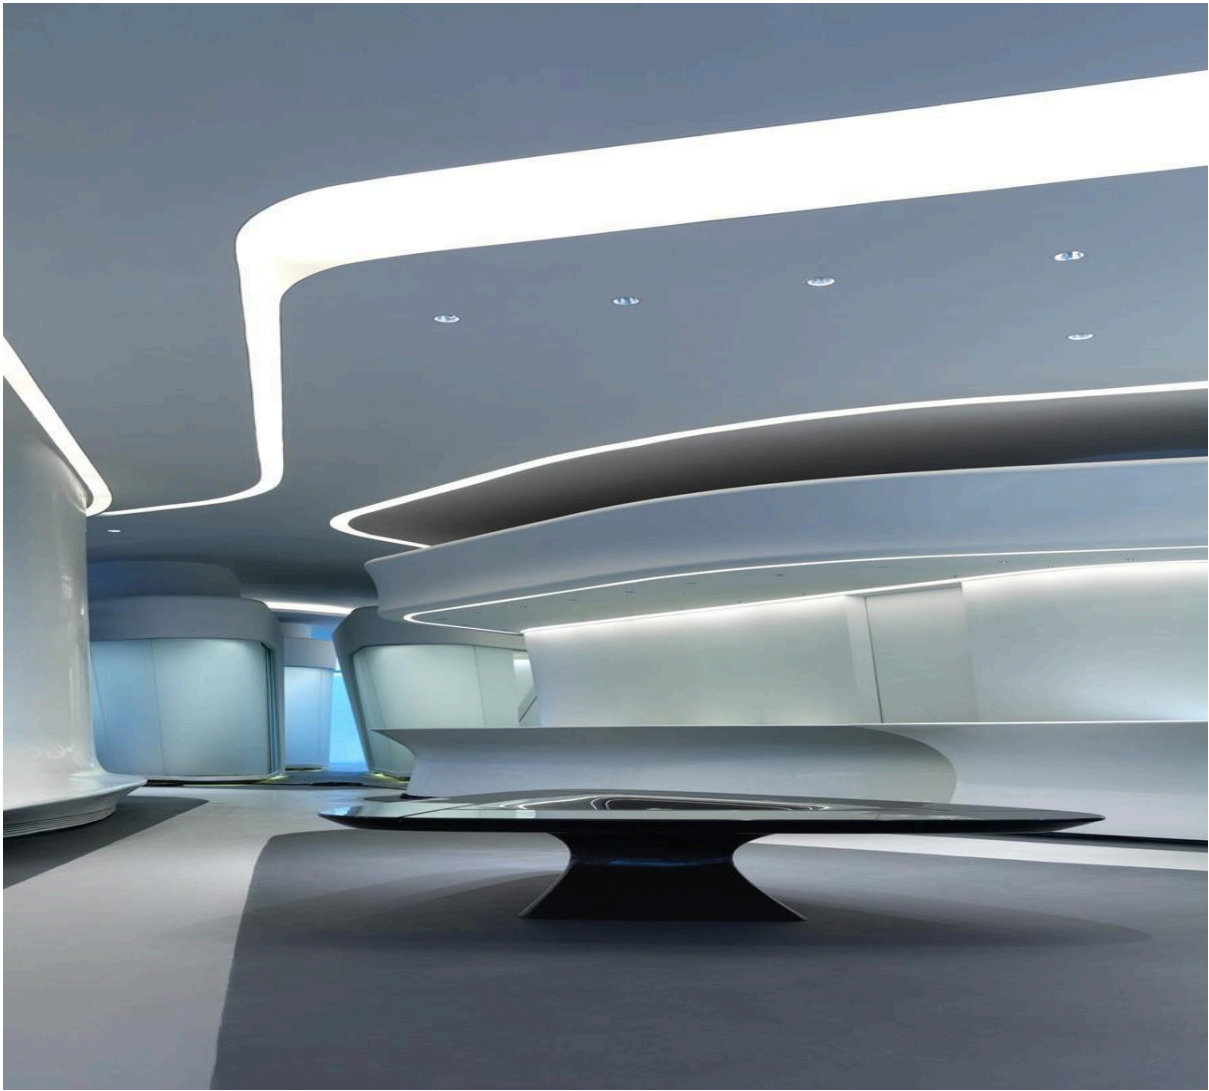

Daniel Monks

Game Concept:

- In a lab testing facility, similar to Portal
- You're a robot whose motor, sensory and cognition skills are being evaluated
- Neo-Futuristic - Clean, clinical, modern aesthetics
- Puzzle game - You must perform your best while completing the objective

Reference Images:

Level Purpose:

- The player must platform from Point A to Point B while avoiding obstacles and completing their other objectives to the best of their ability.
- The platforms are moving to test the player's timing and platforming skills.
- Red platforms will decrease the player's score, while blue platforms will increase the player's score.
- There is a pit below the player, if they fall in they will fail.
- The platforms descend downwards as the player progresses so they cannot backtrack.
- Moving obstacles limit the player's movements and must be navigated around.
- If the player reaches their objective, they will be scored out of 100 for their performance.

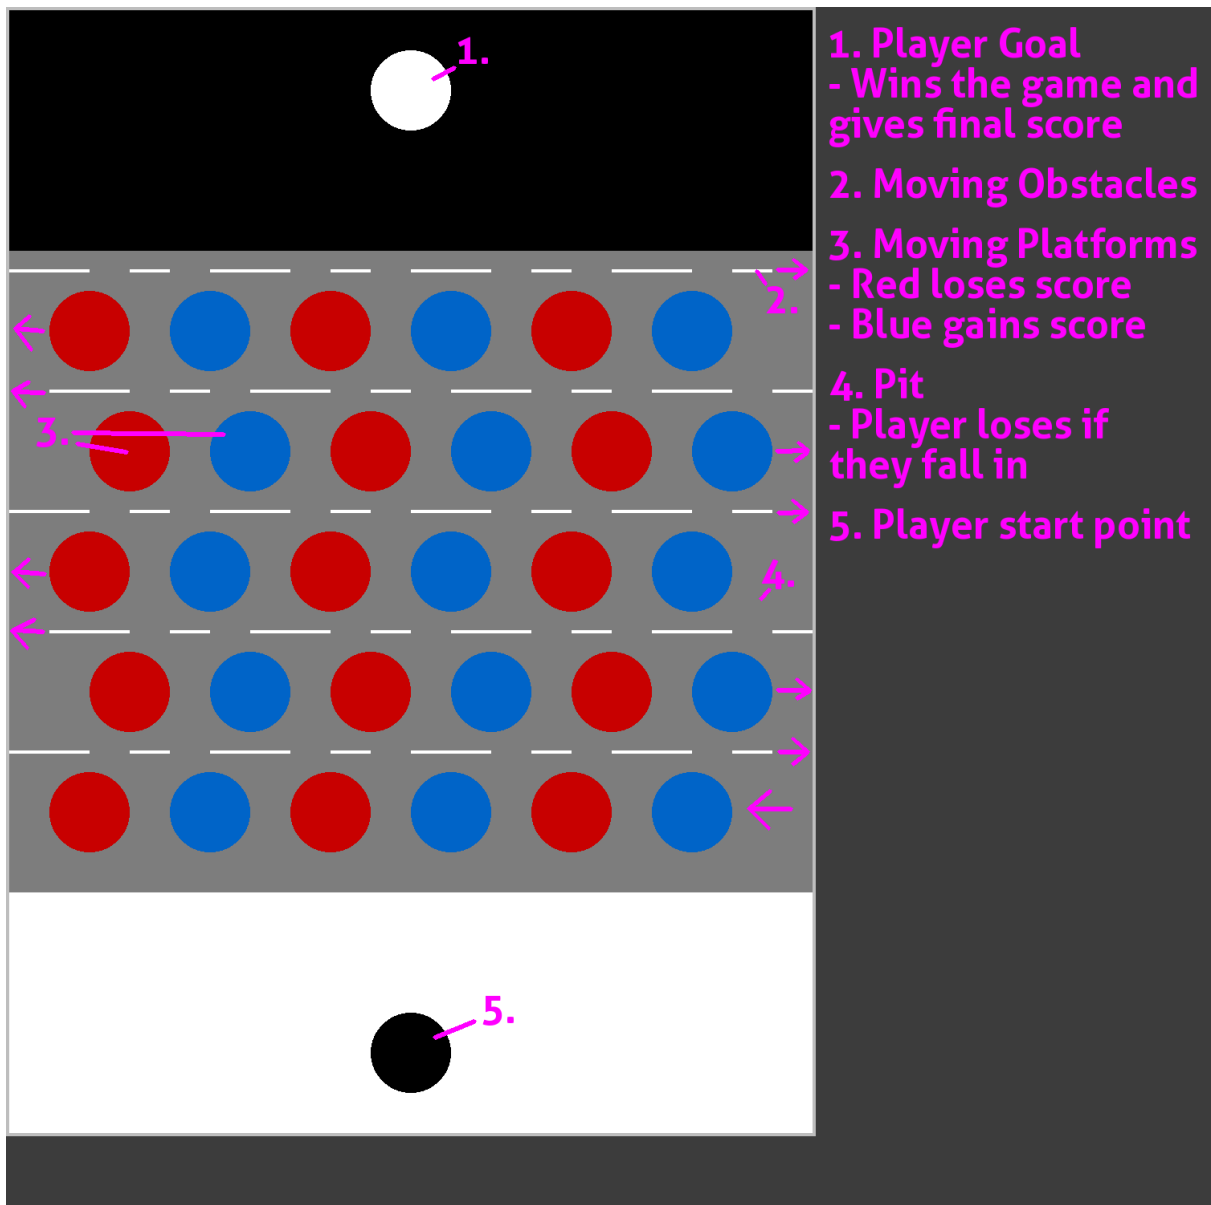

Challenges:

- General platforming
- Timing
- Avoiding Obstacles
- Avoiding red platforms in favour of blue platforms

Elements:

- Start point
- Objective point
- Moving Platforms
 - Red - Subtracts from score
 - Blue - Adds to score
- Moving Obstacles
- Pit
- Sprint mechanic
- Stamina mechanic with stamina bar
- Score mechanic
- Trigger boxes

Topdown Map:

Technical Spec:

- Lose Condition:
 - If the player falls into the pit, they trigger an event that tells them they lose.
- Win Condition:
 - If a player successfully reaches the objective, they trigger an event that tells them they won and grades their performance.
- Score:
 - Each time the player lands on a platform, they trigger an event that adds to or subtracts from their total score. The player is shown their current score once it has been updated and their final score is shown to them upon winning.
- Platforms:
 - Platforms must be moving to provide challenge, and be setup with triggers for the score to be adjusted. Red platforms must subtract from the score and blue must add to the score. Platforms will change direction every few seconds and alternate their direction in rows. Platforms should descend from the start point to the end point in order to prevent backtracking.
- Obstacles:
 - Similar to platforms, must be moving to provide the challenge of blocking the player at different points. Obstacles will also change direction every few seconds and alternate their direction in rows.
- Pit:
 - Must be below the platforming challenge and be setup with a trigger for the lose event.
- Start Point:
 - Must be where the player begins the level at the tallest point.
- Objective Point:

- Must be at the end of the level at the lowest point and be setup with a trigger for the win event.
- Trigger Boxes:
 - Must be appropriately placed for all events and for moving objects, parented to them to ensure they move along with the parent object.
- Sprint Mechanic:
 - Must allow the player to sprint by pressing left shift, and release to stop sprinting while still moving. The player must choose to sprint in order to jump further distances during platforming. Must only be possible while the player's stamina is above 0.
- Stamina Mechanic:
 - Allows the player to sprint and tracks their stamina. Must decrease when the player is sprinting and increasing when the player is not sprinting.
- Score Mechanic:
 - Keeps track of the player's accumulated score.
- Stamina Bar:
 - UI element for displaying the player's stamina.
- Score Bar:
 - UI element for displaying the player's score.
